

COVER LETTER

Date: April 19, 2026

Dear Hiring Team,,

I am writing to apply for the Associate Software Engineer position at Williams-Sonoma. I recently completed my Bachelor of Technology in Computer Science and Engineering and have developed a strong foundation in Java, object-oriented programming, and data structures.

During my experience as a Frontend Developer and through personal projects, I have built and deployed applications using React, Java, and REST APIs. Notably, I worked on a Credit Card Management System and contributed to a rental platform where I focused on building scalable and user-friendly solutions. These experiences strengthened my understanding of application development, API integration, and problem-solving.

I have a keen interest in backend development and cloud technologies. I am familiar with Spring Boot, microservices architecture, and have basic exposure to AWS and Docker. I am eager to further enhance my skills in cloud-native development and distributed systems, which aligns well with the innovative work being done at your organization.

I am particularly excited about this opportunity because of the focus on enterprise applications, microservices, and modern technologies. I am confident that my technical skills, willingness to learn, and collaborative mindset will allow me to contribute effectively to your team.

I would welcome the opportunity to discuss how my skills and enthusiasm align with your requirements. Thank you for your time and consideration.

Sincerely,

Yours Faithfully
Mohit Singh Chouhan
